Department of Physics
McMicken College of Arts and Sciences
SUMMER RESEARCH OPPORTUNITIES
FOR UNDERGRADUATE WOMEN
APPLICATION DEADLINE: March 1, 2007

The Department of Physics is pleased to offer the following research project for the summer of 2007. Interested students are urged to contact the faculty member(s) directing the project that most interests them. By contacting the faculty member, you can discover more about the project, learn what your responsibilities will be and if possible, develop a timetable for the twelve-week research period.

STUDY OF CERENKOV LIGHT RADIATED BY COSMIC RAYS

Project Description

Our group is looking for an energetic student to work in our optics laboratory with another undergraduate (a physics major) making measurements of Cerenkov light radiated in a quartz bar by cosmic rays and imaged onto a set of photomultiplier tubes. We plan to construct a prototype particle detector based on this principle that could be used to identify pions and kaons in a particle physics experiment. Tasks include writing software to read out and analyze signals from the cosmic ray telescope, running simulation code to help us understand how to optimally focus the Cerenkov light, and making measurements with the focusing mirrors and photomultiplier tubes.
