Department of Surgery, Division of Pediatric Orthopaedics
COLLEGE OF MEDICINE AND ENGINEERING

SUMMER RESEARCH OPPORTUNITIES
FOR UNDERGRADUATE WOMEN

APPLICATION DEADLINE: March 1, 2010

The Department of Orthopaedics is pleased to offer the following research project for the summer of 2010. Interested students are urged to contact the faculty member(s) directing the project that most interests them. By contacting the faculty member, you can discover more about the project, learn what your responsibilities will be and, if possible, develop a timetable for the twelve-week research period.

Project Description

The purpose of the Orthopaedic Research Laboratory at Cincinnati Children’s is to improve the treatment, diagnosis, and prevention of musculoskeletal disorders of childhood and adolescence. Particular emphasis is given to the most severely affected surgical patients, and to those with the most common injuries. The core competence of the laboratory is biomechanics. We collaborate with other divisions integral to surgery, such as pathology and radiology, and with other engineering disciplines, currently including mechanical engineering. Our main project focuses on a potential new surgical treatment for idiopathic scoliosis. Other studies include investigation of etiologic mechanisms of osteochondritis dessicans, a focal failure of bone calcification that occurs in young athletes, and development of growth plate injury criteria. Possible student projects include biomechanical testing of spines or knees, or histomorphometry of tissue and cell structure.
